

Table of Contents

I Plenary and Invited Papers

Smoothed Aggregation Spectral Element Agglomeration AMG: SA- ρ AMGe	3
<i>Marian Brezina and Panayot S. Vassilevski</i>	
Approximation of Sparse Controls in Semilinear Elliptic Equations	15
<i>Eduardo Casas, Roland Herzog, and Gerd Wachsmuth</i>	
A Non-Standard Finite Element Method Based on Boundary Integral Operators	27
<i>Clemens Hofreither, Ulrich Langer, and Clemens Pechstein</i>	

II Robust Multigrid, Multilevel and Multiscale, Deterministic and Stochastic Methods for Modeling Highly Heterogeneous Media

Robust Solvers for Symmetric Positive Definite Operators and Weighted Poincaré Inequalities	41
<i>Yalchin Efendiev, Juan Galvis, Raytcho Lazarov, and Joerg Willems</i>	
Additive Schur Complement Approximation for Elliptic Problems with Oscillatory Coefficients	50
<i>J. Kraus</i>	

III Advanced Methods for Transport

Optimization-based Modeling with Applications to Transport. Part 1. Abstract Formulation	61
<i>Pavel Bochev, Denis Ridzal, and Joseph Young</i>	
Optimization-based Modeling with Applications to Transport. Part 2. The Optimization Algorithm	70
<i>Joseph Young, Denis Ridzal, and Pavel Bochev</i>	
Optimization-based Modeling with Applications to Transport. Part 3. Computational Studies	79
<i>Denis Ridzal, Joseph Young, Pavel Bochev, and Kara Peterson</i>	

IV Control and Uncertain Systems

Newton's Method and Secant Method for Set-Valued Mappings	89
<i>Robert Baier and Mirko Hessel-von Molo</i>	
Optimal Control of Multibody Systems in Resistive Media	97
<i>F.L. Chernousko</i>	
Classical and Relaxed Progressively Refining Discretization- Optimization Methods for Optimal Control Problems Defined by Ordinary Differential Equations	104
<i>I. Chrysosoverghi, J. Coletsos, and B. Kokkinis</i>	
On the Asymptotic Stabilization of an Uncertain Bioprocess Model	112
<i>Neli S. Dimitrova and Mikhail I. Krastanov</i>	
Reachable Sets of Impulsive Control System with Cone Constraint on the Control and Their Estimates	120
<i>Tatiana F. Filippova and Oksana G. Matviychuk</i>	
Optimal Mass Transportation-based Models for Neuronal Fibers	128
<i>Antonio Marigonda and Giandomenico Orlandi</i>	
Optimal Controls in Models of Economic Growth and the Environment . .	136
<i>Elke Moser, Alexia Prskawetz, and Gernot Tragler</i>	
On the minimum time problem for Dodgem car-like bang-singular extremals	144
<i>L. Poggiolini, G. Stefani</i>	
Perturbation Bounds for the Nonlinear Matrix Equation $X + AX^{-1}A + BX^{-1}B = I$	152
<i>Ivan Popchev, Petko Petkov, Mihail Konstantinov, and Vera Angelova</i>	

V Applications of Metaheuristics to Large-Scale Problems

Sensitivity Analysis for the Purposes of Parameter Identification of a <i>S. cerevisiae</i> Fed-batch Cultivation	163
<i>Maria Angelova and Tania Pencheva</i>	
A Matheuristic Algorithm for a Large-scale Energy Management Problem	171
<i>D. Anghinolfi, L.M. Gambardella, R. Montemanni, C. Nattero, M. Paolucci, and N.E. Toklu</i>	

On a Game-Method for Modelling with Intuitionistic Fuzzy Estimations. Part 1	179
<i>Lilija Atanassova and Krassimir Atanassov</i>	
A Generalized Net with an ACO-algorithm Optimization Component	187
<i>Vassia Atanassova, Stefka Fidanova, Panagiotis Chountas, Krassimir Atanassov</i>	
Time Series Prediction by Artificial Neural Networks and Differential Evolution in Distributed Environment	195
<i>Todor Balabanov, Iliyan Zankinski, and Nina Dobrinkova</i>	
Differential Evolution Applied to Large Scale Parametric Interval Linear Systems	203
<i>Jerzy Duda and Iwona Skalna</i>	
User-Centric Optimization with Evolutionary and Memetic Systems	211
<i>Javier Espinar, Carlos Cotta, and Antonio J. Fernández-Leiva</i>	
Intuitionistic Fuzzy Estimation of the Ant Colony Optimization Starting Points	219
<i>Stefka Fidanova, Krassimir Atanassov, and Pencho Marinov</i>	
Variable Neighborhood Search for Robust Optimization and Applications to Aerodynamics	227
<i>A. Mucherino, M. Fuchs, X. Vasseur, and S. Gratton</i>	
Processor Array Design with the Use of Genetic Algorithm	235
<i>Piotr Ratuszniak</i>	
A Hybrid Genetic Algorithm for Parameter Identification of Bioprocess Models	243
<i>Olympia Roeva</i>	
A general frame for building optimal multiple SVM kernels	251
<i>Dana Simian, Florin Stoica</i>	

VI Environmental Modelling

Modeling of Toxic Substances in the Atmosphere – Risk Analysis and Emergency Forecast	261
<i>A. Brandiyska, K. Ganev, D. Syrakov, M. Prodanova, and N. Miloshev</i>	
Some Aspects of Impact in the Potential Climate Change on Ozone Pollution Levels over Bulgaria from High Resolution Simulations	269
<i>Hristo Chervenkov</i>	

New Parallel Implementation of an Air Pollution Computer Model – Performance Study on an IBM Blue Gene/P Computer	277
<i>K. Georgiev, Tz. Ostromsky, and Z. Zlatev</i>	
Simulation of the 2009 Harmanli Fire (Bulgaria)	285
<i>Georgi Jordanov, Jonathan D. Beezley, Nina Dobrinkova, Adam K. Kochanski, Jan Mandel, and Bedřich Sousedik</i>	
A Computational Approach for Remediation Procedures in Horizontal Subsurface Flow Constructed Wetlands	293
<i>Konstantinos Liolios, Vassilios Tsihrintzis, Konstantinos Moutsopoulos, Ivan Georgiev, and Krassimir Georgiev</i>	
Parallel Computation of Sensitivity Analysis Data for the Danish Eulerian Model	301
<i>Tzvetan Ostromsky, Ivan Dimov, Rayna Georgieva, and Zahari Zlatev</i>	
Implementation of Two Different Shadow Models into EULAG Model: Madrid Case Study	310
<i>R. San Jose, J. L. Perez, and R. M. Gonzalez</i>	
Model Simulation of Air Pollution due to April 2010 Iceland Volcano Eruption	318
<i>D. Syrakov and M. Prodanova</i>	
Automatic Data Quality Control of Environmental Data	327
<i>A. Tchorbadjieff</i>	

VII Large Scale Computing on Many-core Architectures

Computing Boundary Element Method's Matrices on GPU	337
<i>Gundolf Haase, Martin Schanz, and Samar Vafai</i>	
A Parallel Algorithm with Improved Performance of Finite Volume Method (SIMPLE-TS)	345
<i>Kiril S. Shterev, Stefan K. Stefanov, and Emanouil I. Atanassov</i>	
Towards Distributed Heterogenous High-Performance Computing with ViennaCL	353
<i>Josef Weinbub, Karl Rupp, and Siegfried Selberherr</i>	
High-Throughput-Screening of Medical Image Data on Heterogeneous Clusters	362
<i>Peter Zinterhof</i>	

VIII Multiscale Industrial, Environmental and Biomedical Problems

- Preconditioning of Linear Systems Arising in Finite Element
Discretizations of the Brinkman Equation 373
P. Popov

IX Efficient Algorithms of Computational Geometry

- Blending Functions for Hermite Interpolation by Beta-function
B-splines on Triangulations 385
Børre Bang, Lubomir T. Dechevsky, Arne Lakså, and Peter Zanaty
- Index Mapping Between Tensor-product Wavelet Bases of Different
Number of Variables, and Computing Multivariate Orthogonal Discrete
Wavelet Transforms on Graphics Processing Units 394
Lubomir T. Dechevsky, Jostein Bratlie, and Joakim Gundersen
- Interpolation of Curvature and Torsion Using Expo-rational B-splines . . . 403
Lubomir T. Dechevsky and Georgi H. Georgiev
- Hermite Interpolation Using ERBS with Trigonometric Polynomial
Local Functions 412
Lubomir Dechevsky and Rumien Uluchev
- Triangular Beta-function B-spline Finite Elements: Evaluation and
Graphical Comparisons 421
Lubomir T. Dechevsky and Peter Zanaty

X High Performance Monte Carlo Simulations

- Sensitivity Study of Heston Stochastic Volatility Model Using GPGPU . . 431
Emanouil Atanassov and Sofiya Ivanovska
- A Monte Carlo Simulator for Non-Contact Mode Atomic Force Microscopy 439
Lado Filipovic and Siegfried Selberherr
- Numerical Integration Using Sequences Generating Permutations 447
S. Ivanovska, A. Karaivanova, and N. Manev
- Optimization of Intermolecular Interaction Potential Energy
Parameters for Monte-Carlo and Molecular Dynamics Simulations 455
Dragan Sahpaski, Ljupčo Pejov, and Anastas Misev

Phonon-Induced Decoherence in Electron Evolution	463
<i>P. Schwaha, M. Nedjalkov, S. Selberherr, and I. Dimov</i>	
Study of Human Influenza's Spreading Phenomenon	471
<i>Romică Trandafir and Cornel Resteanu</i>	

XI Voxel Based Computations

Multilevel Solvers with Aggregations for Voxel Based Analysis of Geomaterials	481
<i>Radim Blaheta and Vojtěch Sokol</i>	
A Highly Scalable Matrix-free Multigrid Solver for μ FE Analysis Based on a Pointer-Less Octree	490
<i>Cyril Flaig and Peter Arbenz</i>	
Aliasing Properties of Voxels in Three-Dimensional Sampling Lattices ...	499
<i>E. Linnér and R. Strand</i>	
Analysis of a Fast Fourier Transform Based Method for Modeling of Heterogeneous Materials	507
<i>Jaroslav Vondřejc, Jan Zeman, and Ivo Marek</i>	

XII Contributed Papers

Properties and Estimates of an Integral Type Nonconforming Finite Element	517
<i>A. B. Andreev and M. R. Racheva</i>	
Quadratic Finite Element Approximation of a Contact Eigenvalue Problem	525
<i>A. B. Andreev and M. R. Racheva</i>	
Optimization Methods for Calibration of Heat Conduction Models	533
<i>Radim Blaheta, Rostislav Hrtus, Roman Kohut, and Ondřej Jakl</i>	
Block-preconditioners for Conforming and Non-conforming FEM Discretizations of the Cahn-Hilliard Equation	541
<i>P. Boyanova, M. Do-Quang, and M. Neytcheva</i>	
Comparison of Two Numerical Methods for Computation of American Type of the Floating Strike Asian Option	550
<i>J. D. Kandilarov and D. Ševčovič</i>	
A Kernel-Based Algorithm for Numerical Solution of Nonlinear PDEs in Finance	558
<i>Miglena N. Koleva and Lubin G. Vulkov</i>	

Improving the Efficiency of Parallel FEM Simulations on Voxel Domains	566
<i>N. Kosturski, S. Margenov, and Y. Vutov</i>	
On the Robustness of Two-level Preconditioners for Quadratic FE Orthotropic Elliptic Problems	574
<i>J. Kraus, M. Lymbery, and S. Margenov</i>	
A Computational Approach for the Earthquake Response of Cable-braced Reinforced Concrete Structures under Environmental Actions	582
<i>Angelos Liolios, Konstantinos Chaliouris, Asterios Liolios, Stefan Radev, and Konstantinos Liolios</i>	
An Inverse Problem for the Stationary Kirchhoff Equation	590
<i>Tchavdar T. Marinov and Rossitza Marinova</i>	
An Improved Sparse Matrix-Vector Multiply Based on Recursive Sparse Blocks Layout	598
<i>Michele Martone, Marcin Paprzycki, and Salvatore Filippone</i>	
On the Differences of the Discrete Weak and Strong Maximum Principles for Elliptic Operators	606
<i>Miklós E. Mincsovics and Tamás L. Horváth</i>	
Adaptive FEM Package with Decentralized Parallel Adaptation of Tetrahedral Meshes	614
<i>Tomasz Olas and Roman Wyrzykowski</i>	
Efficient Simulations of the Transport Properties of Spin Field-Effect Transistors Built on Silicon Fins	622
<i>D. Osintsev, A. Makarov, V. Sverdlov, and S. Selberherr</i>	
Large-Scale Simulation of Uniform Load Traffic for Modeling of Throughput on a Crossbar Switch Node	630
<i>Tasho Tashev and Vladimir Monov</i>	
Two-Phase Porous Media Flow Simulation on a Hybrid Cluster	638
<i>Marina Trapeznikova, Boris Chetverushkin, Natalia Churbanova, and Dmitrii Morozov</i>	
Petrov-Galerkin Analysis for a Degenerate Parabolic Equation in Zero-Coupon Bond Pricing	646
<i>R. L. Valkov</i>	
Agents in Grid System — Design and Implementation	654
<i>Katarzyna Wasielewska, Michał Drozdowicz, Paweł Szmeja, Maria Ganzha, Marcin Paprzycki, Ivan Lirkov, Dana Petcu, and Costin Badica</i>	

Using Blue Gene/P and GPUs to Accelerate Computations in the EULAG Model	662
<i>Roman Wyrzykowski, Krzysztof Rojek, and Lukasz Szustak</i>	
Author Index	671
